

One line, as the collector reads it

Processing timeslice:41

every record
forward socket from the collector

The stamper

one per worker, beside the collector

1 **The masker**
variable tokens masked
Processing timeslice:<N>

2 **The drain tree of its family**
one tree per log family
at most 20,000 templates per worker

3 **Two fields set before indexing**
template_version · template_status
status: matched, new or no_template
empty or over 4096 chars: no version

stamped record
second socket, back to collector

The record, indexed with both fields

local or central index, by severity

every 300 s
a bucket document

per family
and window

every 300 s
definitions
merged, watermark

hourly self-check
of local index

a check document

The bucket indices

template-buckets-5m-*
template-buckets-1h-*
kept 4 d and 66 d

reads 1-hour
buckets

expiry, reports
failed checks

hourly query

on view
definitions

The catalogue

template-catalog
definitions
watermarks, checks
reports

A person's decisions

template-triage
labels, notes

labels, notes
on save

The catalogue maintenance

hourly, one hour behind
1 expire definitions
and checks first
2 sum each bucket
3 shared indices
against buckets
4 write checks last

Two monitors, hourly

run by the cluster
template-new
first seen this hour
template-count-check
a check failed

The Templates page

in the shifter view
reads catalogue, buckets,
sample lines, episodes
stores labels and notes
